Wk 7 - Coding Components & Feasibility Report

Features
- Data visualization
- Scroll Animation
- Left sidebar
    - API: presents specific info based on scroll position
    - Interactive slider: displays w/in left sidebar images accordingly (may not incorporate)

Technologies
- Chart.js
- AOS.js (Animate on scroll)
- Fullpage.js
- API + Research for Data

Assessment (ability to build w/in timeframe)
- I am comfortable using AOS.js and Fullpage.js for my scroll animation due to the library liberty assignment. I haven't touched chart.js nor collected specific data, however, I believe it's within my reasonable capability to implement these two. As to how far I will get on this project, I may implement my idea for an interactive slider.
